PRECISION PROJECTS AUSTRALIA

ESTABLISHED 2023

LEEDERVILLE, WESTERN AUSTRALIA

CAPABILITY STATEMENT

PRACTICAL SOLUTIONS / PROVEN RESULTS

Project logistics, supply chain strategy and heavy lift advisory for complex Australian projects.

VETERAN OWNED BUSINESS

VETERAN OWNED BUSINESS

OUR LEADERSHIP

ASH TALBOT

FOUNDER & MANAGING DIRECTOR

AUSTRALIAN ARMY, TRANSPORT CORPS

Ash founded Precision Projects Australia with a single vision: to redefine project delivery excellence through strategic thinking, innovation and uncompromising execution discipline.

Seven years in the Australian Army Transport Corps, including logistics and operations support to Special Forces, established a non-negotiable standard: plan properly, communicate clearly, execute without compromise. That philosophy now underpins every engagement, aligning strategy, procurement and execution from the outset so that every decision creates measurable value.

Two decades directing logistics on major Australian construction, resources and infrastructure programs turned that standard into a method, built on the packages where access is constrained, the freight is oversized and the schedule leaves no room to recover lost time. Along the way Ash built a reputation for turning complex logistics challenges into clear, executable pathways.

Postgraduate qualified in strategic leadership, Ash structures every engagement around strategy first, working out what success looks like and what pathway reaches it before anything is procured or committed. Leading from the front, he embeds alongside client teams to understand challenges in real time, adapt as conditions change and hold momentum through every phase of delivery.

> AT PRECISION PROJECTS AUSTRALIA,
> FAILURE TO DELIVER IS SIMPLY NOT AN OPTION.

WHO WE ARE

CLARITY IN COMPLEXITY

We don't measure success by revenue. We measure it by the value we unlock for our clients.

> We do this because we are passionate about finding innovative solutions to complex projects, not because we are chasing a number.

HOW WE WORK. We operate as an embedded part of our clients' project teams. We own and operate no plant, equipment or fleet of our own, and we are not competing for the delivery scope. Precision Projects Australia is exclusively a strategic logistics project management and superintendency service, which means our advice is shaped by what is right for the project rather than by what we have sitting idle in a yard.

From urban congestion in high-rise builds to remote camp infrastructure across hundreds of kilometres, our strength lies in structured, high-performance logistics strategies that turn complexity into competitive advantage. We don't guess, we listen.

01

DESIGN-ALIGNED LOGISTICS

Access routes, lift points and construction sequencing resolved with design and staging early, before they become site problems.

02

END-TO-END DISCIPLINE

Front-end planning, vendor engagement and on-site superintendency run as one continuous process, built to catch risk early and cut rework.

03

COST OUT, EARLY

Modularisation, transport mode selection and better packaging identified before decisions are locked in, not after.

EARLY CONTRACTOR INVOLVEMENT

Structured ECI workshops separate vision, strategy and execution into three agreed outputs. Only once all three are settled do we go to market, so every procurement decision fits the project as it really is.

BROKERING & NEGOTIATION

We know vendor capacity and prevailing rates across heavy haulage, craneage and modular fabrication before the first conversation, producing sharper outcomes and faster mobilisation.

PORT AND MARINE LOGISTICS

WHAT WE DELIVER

CORE SERVICE STREAMS

01
STRATEGIC PROJECT MANAGEMENT

Full ownership of delivery from concept to close-out, with logistics strategy built into early design to improve constructability and reduce rework.

- Scope, schedule, cost and risk management run through Primavera P6 and MS Project
- Embedded delivery teams inside your tender or construction team
- Logistics input to design reviews so access, lift points and staging work from day one
- Structured demobilisation, lessons learned and contract closure

02
SUPPLY CHAIN STRATEGY & PROCUREMENT

Procurement structured around delivery performance rather than unit cost alone, cutting total cost of ownership and improving schedule confidence.

- Sourcing optimised for lead times, transport criticality, vendor capability and location risk
- RFQs, evaluation matrices and onboarding frameworks built for logistics providers
- Supplier readiness tracked against site sequencing, with inspections and permits
- Scenario modelling for accurate budgets and value engineering

03
HEAVY LIFT & TRANSPORT ADVISORY

The technical interface between clients, engineers, transport providers and regulators, managing a complex lift or move from first planning to on-ground execution.

- Route surveys and access studies covering clearances, turning radii and pavement capacity
- Validation of lift plans, CoG calculations, rigging schematics and method statements
- Regulatory interface with main roads, utilities, escorts and police
- Vendor selection and sequencing for lifting, haulage and night moves

04
TURNKEY LOGISTICS PLANNING

Planning and superintendency of end-to-end logistics for construction and infrastructure projects, from procurement strategy through to final delivery.

- Integrated logistics plans aligned to construction schedule and site access
- Route and mode optimisation for time, cost and carbon, including rail and coastal barge
- Yard, laydown and material handling design and oversight
- Chain of Responsibility, fatigue and load restraint compliance with GPS tracking

05
DIGITAL LOGISTICS & SITE COORDINATION

Connected platforms giving real-time visibility across mobilisation, delivery and site coordination, layered on the advisory and procurement work as one model.

- Live scheduling of site deliveries, gate availability and traffic sequencing
- Digital management of CoR and Heavy Vehicle National Law obligations
- Real-time inventory and asset tracking with automated shortage alerts
- Number plate recognition and camera-based site access monitoring

06
VETERAN EMPLOYMENT PROGRAMS

As a veteran owned and operated company, this is not a box-ticking initiative for us, it is personal. We help contractors and employers establish, develop and sustain veteran employment programs.

- Program design: fit-for-purpose employment strategies aligned to project workforce requirements
- Talent pipelines: disciplined candidates with proven experience in leadership, logistics and high-pressure environments
- Cultural alignment: training and support covering veteran strengths, onboarding and long-term engagement
- Social impact reporting: ESG-aligned reporting and veteran impact metrics for stakeholders

OUR PEOPLE

A CAPABLE FORCE

HOW WE RESOURCE

We place discipline-specific professionals directly into client teams, deployed against the exact capability gap a project has rather than spread thin as generalists, drawn from a national network and scaled to scope rather than carried as overhead.

THE STANDARD WE SET

Every placement carries the same veteran-shaped standard: accountable, mission-focused and outcome-driven. Our people sit inside your team and make decisions with the same accountability as your own staff.

CAPABILITY	WHAT THEY BRING
Senior Logistics Management	Strategic oversight of end-to-end logistics, vendor performance and program-level risk across multi-site projects
Project / Program Managers	Delivery leadership from concept to close-out, integrating logistics into the wider construction and commercial program
Logistics, Laydown & Materials Supervisors	On-ground control of yard layout and material flow, aligned to the construction sequence
Materials / Preservation Engineers	Technical assurance of handling, storage and preservation standards through to installation
Heavy Lift & Transport Engineering	Oversight of lift plans, rigging schematics, CoG calculations and route studies
Temporary Works Engineering	Design and certification support for temporary structures, access platforms and load-bearing arrangements
Traffic Engineers / Planners	Traffic management planning, approvals and route strategy for oversize and over-mass movements
Warehouse Management	Inventory control, receipt and dispatch discipline, storage optimisation
Security Management	Site and asset security planning, access control, protection of high-value freight
S26 & Non-S26 Personnel	Site-ready supervisory personnel sourced under the appropriate industrial framework

TUNNELLING

URBAN CONSTRUCTION

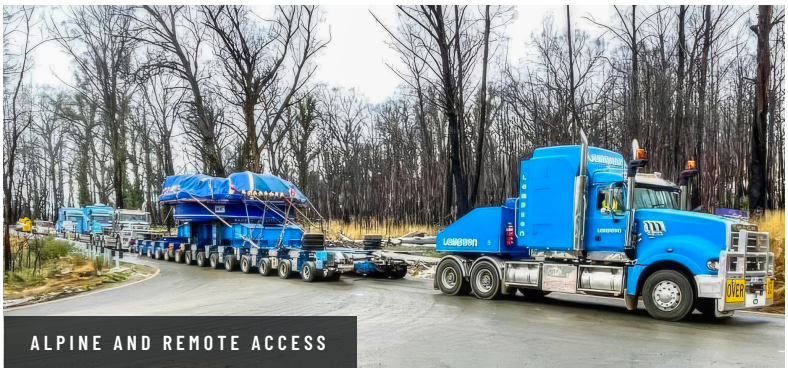

OUR FOUNDATION

EXPERIENCE BEHIND THE BUSINESS

Precision Projects Australia was built on senior logistics roles across projects worth more than $85 billion.

The projects below are not Precision Projects Australia engagements and are not presented as our delivery record. They are listed to show the scale and complexity of the environments our Founder has worked in, and the depth of experience the business draws on.

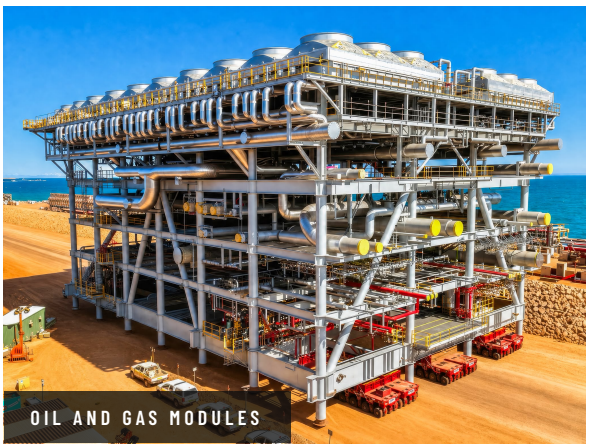

PROJECT	LOCATION	VALUE	SECTOR
Gorgon LNG	Barrow Island, WA	$70B+	Oil & Gas
Snowy Hydro 2.0	Snowy Mountains, NSW	$12B+	Renewable Energy
Sydney Metro West	Sydney, NSW	$2.2B	Infrastructure & Tunnelling
METRONET Victoria Park to Canning	Perth, WA	$1.42B	Rail Infrastructure
Perth Children's Hospital	Perth, WA	$1.4B	Health & Construction
Chisolm Road Prison Project	Lara, VIC	$1B	Correctional & Construction
Western Ridge Crusher	Newman, WA	$800M	Mining & Resources
New Bridgewater Bridge	Hobart, TAS	$786M	Civil Infrastructure

ALPINE AND REMOTE ACCESS

LIVE URBAN ENVIRONMENTS

OIL AND GAS MODULES

OVERSIZE AND OVER-MASS

CAPABILITY SNAPSHOT

INDUSTRIES & CREDENTIALS

MINING & RESOURCES
Modular process plants, shutdown logistics, mine site infrastructure

INFRASTRUCTURE & CIVIL
Rail bridges, tunnel logistics, road upgrades, public utilities

CONSTRUCTION
High-rise logistics, laydown management, modular delivery, crane studies

OIL & GAS
Offshore skids, pipe racks, compressors and mechanical packages

DEFENCE
Secure site establishment, sensitive transport coordination, base infrastructure

RENEWABLE ENERGY
Alpine and remote plant movement, TBM and modular infrastructure logistics

VETERAN OWNED & OPERATED

Being veteran owned is not a badge we display and move past, it is how the business runs: mission-focused planning, clear accountability and calm decisions under pressure.

We help clients build the same advantage internally through our veteran employment program support.
